

## Acumen IT is one of the largest technology firms in the southeast...

### ERP

As a complete and auditable system of record, ERP (Enterprise Resource Planning) has the ability to help organizations gain visibility into operations, streamline processes, promote efficiencies, manage demand, increase employee productivity, service customers, and cut costs.

Truly, ERP can deliver transformational capabilities that enable a growing business to take advantage of opportunities and execute on a larger scale.

Acumen IT leverages information technology to *materially* improve the performance and health of our clients' businesses. Acumen IT helps organizations intelligently apply technology to...

- reduce risk,
- solve pressing business problems,
- manage costs,
- increase productivity,
- grow smartly, and
- maximize profitability.

### **A Competitive Edge...**

A competitive edge is achieved when an organization acquires or develops an attribute that allows it to outperform its competitors. To survive in today's challenging marketplace, companies must find new ways to leverage technology to improve the efficiency and productivity of their business.

Your data – and the systems that collect, manage, and protect your data – are at the core of your business operations. The better your systems are designed to support your business strategy and processes, the more effectively you can improve business performance and manage growth.

Acumen IT will help you leverage technology to gain a competitive edge!

### **ERP**

Acumen IT is dedicated to providing industry-leading ERP solutions to mid-market companies. Acumen IT specializes in helping companies automate and integrate business processes to reduce costs, operate more efficiently, gain a competitive edge, and manage growth.

Acumen IT is a Microsoft Gold Certified Partner and Infor Channel Partner. Acumen IT is closely aligned with Microsoft, Infor, and other Independent Software Vendors (ISVs) to help clients standardize on industry leading mid-market ERP products and business software.

Acumen IT's staff of senior-level engineers, developers, software specialists, and application consultants are proficient in a broad range of industries, business processes, and functional areas of an organization including finance, inventory, distribution, supply chain, production, HR/payroll, I.T., and more.

## Data Protection

As we migrate from paper records into an increasingly digital world, the importance of proper data management has become paramount. A more sophisticated data protection plan featuring multi-copy recoverability is a must for all companies looking to protect their intellectual property and data.

DisasterBackup, offered by Acumen IT, ensures your data is protected and readily available at all times, helping secure your critical data and thoroughly protecting your business.

## Services

Acumen IT manages your I.T. so that you can concentrate on managing your business. We serve as your outsourced IT department... or augment your internal I.T. staff... through a flexible menu of IT support plans and solutions that are tailored to your particular business operation and requirements. It's a legitimate challenge to find highly qualified professionals that can skillfully manage your IT operations. Acumen IT is staffed with multiple "teams" of experienced IT engineers who help you with general support needs, system upgrades, complex IT projects, IT audits, or the creation and deployment of a 3 year IT strategic plan. Acumen IT delivers industry-leading technology solutions for virtualization, cloud computing, security, wireless, and networking.

Acumen IT offers an a la carte menu of services that enables you to pick and choose only those services you need.

## Security

Acumen IT delivers business continuity solutions that enable businesses to operate virtually uninterrupted in the face of any natural, technical, or cyber disaster.

Acumen IT ensures that companies can recover and be operational as quickly as possible after a minor or major disaster. Acumen IT offers a true imaged-based backup to a local server, while concurrently uploading your entire system image to an off-site data center in the cloud. This "hybrid cloud" backup solution allows you to quickly and easily push data to a local backup device that takes over in the event of a local server failure or recover your system from the virtual image in the cloud in the event of a true physical disaster. For system access and performance issues resulting from compromised equipment in your data room, system recovery can take only minutes with minimal impact to your business operations.
